

OT Cybersecurity

PROTECTION TAILORED TO
INDUSTRIAL INSTALLATIONS

The only
true OT
specialist

Hands-on
experience with
SCADA, PLCs, and
industrial networks

One-stop-shop:
from risk analysis
to operations
management

Independent
and technology-
neutral advice

Industrial networks and production processes are becoming increasingly digitalised. But this evolution also brings new vulnerabilities. Equans Digital protects your OT environment without disrupting operations. From asset mapping to monitoring and intervention: we are your partner for safe, reliable, and compliant industrial installations.

Safe, efficient, and compliant.

Why invest in OT Cybersecurity?

The benefits of digitalisation are significant, but the risks are often underestimated:

Legacy and interconnected networks are vulnerable to cyberattacks

Lack of visibility of OT assets hampers security

New regulations (NIS2, IEC 62443) require action

Unprotected OT infrastructures can lead to production downtime, data loss, or reputational damage

Traditional IT security is not sufficient in an operational environment

In industrial environments, every second counts. A security incident can severely jeopardise the continuity of your operations.

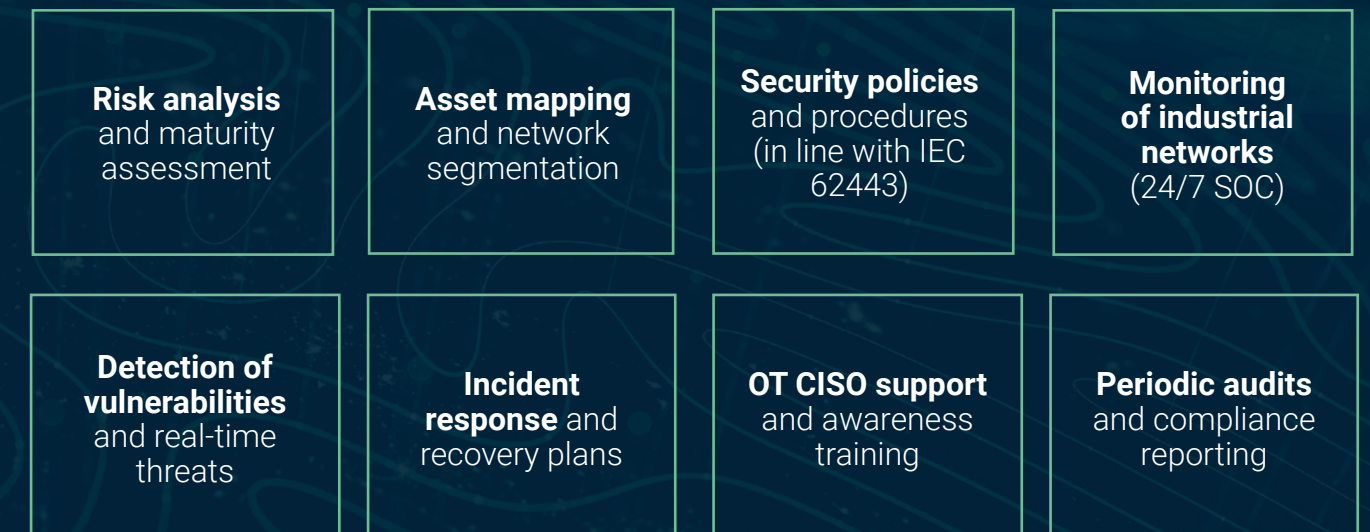

« Our approach provides concrete solutions focused on business impact, risk and operational feasibility.

How does Equans Digital protect your OT environment?

We combine deep OT knowledge with cybersecurity expertise, following a pragmatic and step-by-step approach:

Your benefits

- No impact on production during implementation
- One single point of contact: from analysis to intervention
- Reduced risks and improved compliance
- Solutions adapted to your specific industrial environment

With Equans Digital as your OT partner, you choose:

Practical protection
tailored to
your process
installations

One-stop-shop:
from risk analysis
to ongoing
management

Technology-neutral
solutions focused
on continuity

Local specialists,
certified to
IEC 62443

Are you really want to protect your industrial environment?
